

## Accelerating data analytics with cloud-native file storage

**Luke Anderson**

Storage Sales Leader, AWS

# Why are customers using the cloud for data science?

Faster time to insights

Increased collaboration

Speed of innovation

# Why AWS for data science workloads

Unlimited, on-demand infrastructure enabling scale and agility not attainable on-premises

---

The broadest portfolio of compute resources, data storage services, and transport technologies

---

Secure access to machine learning services, analytics services, and data science tools to simplify workflows

Better ROI

Faster time to insights

# When to use a file system or a data lake for analytics

- Applications, users or tools that require a file interface
- Strong consistency

- Global repository for large scale data analytics
- Rich metadata

# Common workloads

Genomics

Machine learning

Financial modeling

Big data analytics

# Traditional storage is not designed for modern data science

Administrative  
overhead

Lack of  
scalability

Lack of agility

# Modern applications and data science

## Traditional applications

- Shared application servers
- IT deployed & managed

## Modern applications

- Developers directly deploy and manage functions and containers

---

## Traditional data science

- Shared servers with user home directories, linked to LDAP/AD
- Approved toolsets, datasets

## Modern data science

- Per-user notebook servers
- Data scientists deploy own scale-out training jobs

Using the right tool for the job

# Using the right tool...for the job...for the workload

Amazon Elastic File System (Amazon EFS)

Amazon FSx for Windows File Server

Amazon FSx for Lustre

**File storage for business workloads**

**File storage for compute-intensive workloads**

# Amazon EFS

Providing a more reliable,  
cost-effective, and cloud-  
native NFS service

Elastic

Highly  
available

Simple

High  
performance

Cost  
optimized

Access from  
on-premises

400% higher read  
operations/s

# Amazon FSx for Windows File Server

Lowest-cost file storage  
in the cloud for  
Windows Workloads

Fully  
managed

Multi-AZ

Built on  
Windows Server

Fully  
compatible  
with the  
Windows file  
system

Joins to  
customer AD  
with full  
Windows ACLs

HDD or SSD  
storage options

# Amazon FSx for Lustre

World's most popular high-performance file system

Fully managed

Amazon Simple Storage Service (Amazon S3) datasets as POSIX file system

Highly performant – scratch or persistent

Designed for compute-intensive workloads

Flexible data processing options

Access from on-premises & integration with AWS services

# Journey to (and in) the cloud

DISCOVER<sup>®</sup>

- Moved analytics environment to AWS for agility benefits
- Built analytics environment based on a DIY file system on EC2
- Migrated to AWS managed storage service (Amazon EFS) for greater stability and ease of operations
- Moving to a fully managed storage service reduced the amount of time required to manage storage infrastructure by 90%

# Want to learn more....then try it yourself

We have prepared a tutorial covering how to create an Amazon EFS to share with ML notebooks.

1. Go to <http://www.github.com>
2. Search for Amazon EFS
3. Click through to *amazon-efs-tutorial*
4. Then click through to the *data-science* folder

Data Science Tutorial

# ...Let's walk through the demo...

# Recap

1. Better ROI and faster time to insights
2. Broad portfolio of native file storage solutions
3. Simple and fast to get started

# AWS Training and Certification

## Training for the Whole Team

Explore tailored Data or Database learning paths for customers and partners

## Flexibility to Learn Your Way

Build cloud skills with free digital Data training courses such as "The elements of Data Science", or dive deep with classroom training

## Validate Skills with AWS Certification

Demonstrate expertise with a Data industry-recognized credential (Data analytics and Database Specialty AWS Certifications)
